

Watershed forests across Colorado are changing dramatically. These changing conditions pose serious challenges to source water supplies and water providers throughout the region. The threat of catastrophic wildfire and the resulting impacts are only one of these challenges. Water quality and quantity can also be affected by changing and dying vegetation. This one day forum brings together experts in water management, forest science and public policy to share experiences and look to the future. Join us on September 25th for a full day of forest health and water supply discussions at Aspen Glen in Carbondale, CO.
